DETAILED ACTION

1. This communication is in response for July 29, 2004.

After a search and a thorough examination of the present application and in light of the prior art made of records, claims 1-20 are allowed.

Reason for Allowance

2. The prior art made of records does not teach or fairly suggest the combination of elements, as recited in independent claim 1 as argued by the applicant's. More specifically, the prior art of records fails to fairly teach the steps of

wherein a node relationship graph (NRG), wherein each node in the NRG corresponds to at least one node in the data graph, and wherein each node in the NRG includes a computed set of valid sub-node patterns; a pattern testing system that determines if the set of target sub-node patterns for a node pattern matches the set of valid sub-node patterns for a corresponding NRG node when a node is encountered in the data graph.

The prior art made of records does not teach or fairly suggest the combination of elements, as recited in independent claim 9 as argued by the applicant's. More specifically, the prior art of records fails to fairly teach the steps of

wherein a system for generating a set of target sub-node patterns for each inputted node pattern; a pattern testing system that determines if the target sub-

node patterns for a node pattern match the valid sub-node patterns for a corresponding node in the NRG when a node is encountered in the data graph.

The prior art made of records does not teach or fairly suggest the combination of elements, as recited in independent claim 14. More specifically, the prior art of records fails to fairly teach the steps of

wherein computing a set of target sub-node patterns for each inputted node pattern; testing to determine if the target sub-node patterns for a node pattern matches the valid sub-node patterns for a corresponding NRG node when a node is encountered in the graph.

The prior art made of records does not teach or fairly suggest the combination of elements, as recited in independent claim 16 as argued by the applicant's. More specifically, the prior art of records fails to fairly teach the steps of

wherein means for generating a set of target sub-node patterns for each inputted node pattern; means for determining if the target sub-node patterns for a node pattern match the valid sub-node patterns for a corresponding node in the NRG when a node is encountered in the data graph.

The dependent claims, being definite, further limiting, and fully enabled by the specification and are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
